Employment History

09/2025 – Present

Full Stack Developer, Poznaj Góry
Implement and maintain full-stack features for the Poznaj Góry platform. Responsibilities include:

- Designed and integrated Google OAuth2 authentication flows to improve sign-in reliability and security.
- Built content ingestion scripts to import and validate content delivered by the content team, ensuring consistent formatting and database integrity.

07/2025 – Present

Junior Software Developer, Aptiv
Working on embedded and tooling for automotive systems. Key contributions:

- Utilized gRPC-based services for data exchange between QNX and Linux targets.
- Implemented secure image signing and verification tooling to streamline firmware delivery.

05/2025 – 08/2025

Frontend Web Developer, Redinn
Implemented a frontend from Figma designs for the company landing page: `https://redinnlabs.com`.

- Converted Figma assets to responsive HTML/CSS with TailwindCSS and Astro framework.

07/2024 – 10/2024

Software Intern (C++), Aptiv
Automotive software development and tooling.

- Fixed functional bugs across control modules.
- Developed a Bash utility to detect unused components in the codebase, reducing build size and maintenance overhead.
- Wrote unit tests for modified applications.

06/2023 – 10/2023

Software Intern (C++), Aptiv
Focused on safety-relevant components and test infrastructure.

- Implemented a checksum component for parition-integrity verification.
- Refactored outdated GoogleTest unit tests and updated the CMake build system to run the refactored tests reliably.

Education

10/2023 – Present

B.Sc. Computer Science, AGH UST
Relevant coursework: Linear Algebra, Calculus, Programming in Rust, Erlang, Elixir, Data Structures and Algorithms, Operating Systems, Imperative/Object-Oriented/Functional Programming, Databases, Theory of Concurrency, Computer Networks.

Education (continued)

09/2019 – 05/2023 **ICT Technician, Technikum Łączności no. 14, Kraków, Poland**
Focus: Local Area Network configuration and administration, Operating systems.

Skills

Programming Languages	C, C++, Java, Python, Rust, Erlang, Elixir, TypeScript, SQL, Bash.
Web / Frontend	HTML, CSS, TailwindCSS, Astro, JavaScript/TypeScript, NextJs, Strapi.
Tools & DevOps	Git, Linux, Docker, Kubernetes, CMake.
Testing	GTest, GMock, Pytest, JUnit.
Common libraries	FastAPI, Flask, Pytorch, Scikit Learn, Pandas, Numpy.
Other	Object Oriented Programming, Functional Programming, REST API, gRPC, Machine Learning.

Miscellaneous

Projects

03/2026 **Word2Vec in pure NumPy** (Python, Numpy)
Word2Vec embedding model architecture and training implemented from scratch using CBOW and negative sampling, built solely with NumPy without relying on Python ML frameworks.

01/2026 **Fake Router** (Python, Scapy, Docker)
Simulation of fake router that broadcasts malicious RIPv2 packets to redirect packets through fake router. This project utilizes Docker containers to present how malicious packets can impact network traffic.

05/2025 - 06/2025 **Draw Master** (Rust, Serenity, Poise, Shuttle)
Discord bot that splits users in a voice channel into teams or randomly selects a winner.

05/2025 **TODO REST API** (Java, Spring Boot)
REST API backend for TODO application built with Java and Spring Boot framework.

03/2025 **Flask Projects** (Flask, Python)
Applications built with Python and Flask e.g. TODO application.

11/2024 – 01/2025 **Darwin World** (Java, JavaFX)
Simulation project where an evolving world of animals and plants unfolds over time. Uses JavaFX for the UI.

DB University Project (SQL, Python, MS SQL Server)
Design and implementation of a Database Management System (DBMS) for a company offering courses and webinars; sample data generated with Python.

Kirkpatrick Point Location (Python, Jupyter Notebook)
Interactive tool demonstrating the Kirkpatrick point-location algorithm.

04/2024 – 05/2024 **Space Invaders v1 and v2** (Python, Pygame)
Retro games built with Pygame following OOP paradigm.

Contests

12/2025 **ADATA Hackathon**
Participated in a Machine Learning hackathon organized by the BIT student's research group in cooperation with ADATA.

Miscellaneous (continued)

Achievements

10/2024 — **Recipient of Rector's Scholarship**, AGH University (top 10%).

2019 – 2023 — **Parents' Council Scholarship,** Technikum Łączności — awarded six times (top 2 ICT students by GPA).

2022 – 2023 — **Third-degree laureate, AGH Diamond Index Olympiad** (15th and 16th editions).

Certificates

02/2025 — **Containers & Kubernetes Essentials**
A certificate covering core concepts of Docker, containers, and Kubernetes.

06/2024 — **English B2 Language Certificate**
Language Certificate issued by the Department of Foreign Languages AGH University of Kraków acknowledging competence in reading, written and spoken English.

05/2023 — **ICT Technician Certificate**
Qualification in IT network administrations: Local Area Network configuration and administration.

Languages

- **English** — Professional Working Proficiency.
- **Polish** — Native Proficiency.

Research

10/2025 - present — **CheckEmbed** (Python, Pytorch, Hugging Face)
LLM hallucination detection framework based on cosine similarity between text embeddings. Project is being built in cooperation with ETH Zurich.
